

# BNS Simple Grind Menu

All grinds \$75, except LL26 \$60

K.I.S.S. stands for "Keep It Simple, Stupid" – a message we get often from our less geeky customers. In the spirit of KISS we recommend these core grinds as the starting point for everyone. These broad-range structures provide a solid foundation to handle every condition, whether you have one pair of skis or twenty.

Different regions experience different prevalent conditions. Skiers in the high Rockies will want to adjust toward the colder end of the menu, while skiers in the Northwest might consider heading toward the warmer end of the spectrum. We are always happy to consult with individuals or teams and can make recommendations to keep your life simple but ensure that you get the best of what we have to offer.

# BNS Expanded Racing Menu

Give us an inch and we'll offer you 15 different structures. The reality is that snow conditions vary wildly, and we often need specific solutions to complement our broad-range core grinds. The grind development process is ongoing and we make it our business to keep you up to date. We list what's new on this page and show our expanded graphical menus to the right. Download our full detailed grind menu from bouldernordic.com to get more specifics.

All grinds \$75, except LL26 \$60.

## New for 2009-2010

**Li2 & Li3** – Our standby classic linear structures, LJ02 and LJ03, were given to us by Lars Svensson along with our first Tazzari machine in 2002. Over time we've tinkered with these grinds, but we have always come back to these simple linear structures. In the past two years as part of the Olympic testing project we have done extensive testing with the production parameters on these structures and have developed a superior surface texture. These structures are an evolutionary step from the LJ grinds. But these are, well, better.

**XTi2** – XTi2 is like our old XC02 but with bands of structure removed, providing "bridges" to keep the structure above the surface of the snowpack. More flat base material and superior aeration means better cold snow performance.

**0/1, 1/1, 2/2 & 3/3** – This line of structures has been adapted from US Ski Team World Cup structures to be more applicable to North American conditions. These are multi-pass compound structures with a relatively shallow but faceted texture. In North America these grinds particularly shine in **older crystals** or **manmade snow**.

**CV Series** – Our new "Callaghan Valley" series grinds have been developed as part of the Olympic project in response to the uniquely challenging **new snow** conditions that we regularly face in North America. Compared to Europe our snow demands finer grinds and smoother textures. The CV series saw plenty of racing action on the Nor Am circuit and the Eastern Collegiate circuit last season with excellent results. While the CV0 is less established than the ZR1 we're confident that it will assume a central role as a go-to cold structure.
